The Integrated Case Management Manual

Value-Based Assistance to Complex Medical and Behavioral Health Patients

Springer Thoroughly revised and updated since its initial publication in 2010, the second edition of this gold standard guide for case managers again helps readers enhance their ability to work with complex, multimorbid patients, to apply and document evidence-based assessments, and to advocate for improved quality and safe care for all patients. Much has happened since Integrated Case Management (ICM), now Value-Based Integrated Case Management (VB-ICM), was first introduced in the U.S. in 2010. The Integrated Case Management Manual: Valued-Based Assistance to Complex Medical and Behavioral Health Patients, 2nd Edition emphasizes the field has now moved from "complexity assessments" to "outcome achievement" for individuals/patients with health complexity. It also stresses that the next steps in VB-ICM must be to implement a standardized process, which documents, analyzes, and reports the impact of VB-ICM services in removing patient barriers to health improvement, enhancing quality and care coordination, and lowering the financial impact to patients, providers, and employer groups. Written by two expert case managers who have used VB-ICM in their large fully disseminated VB-ICM program and understand its practical deployment and use, the second edition also includes two authors with backgrounds as physician support personnel to case managers working with complex individuals. This edition builds on the consolidation of biopsychosocial and health system case management activities that were emphasized in the first edition. A must-have resource for anyone in the field, The Integrated Case Management Manual: Value-Based Assistance to Complex Medical and Behavioral Health Patients, 2nd Edition is an essential reference for not only case managers but all clinicians and allied personnel concerned with providing state-of-the-art, value-based integrated case management.

Information and communication management strategy development: A toolkit for agricultural and rural development organisations:

Facilitator's guide

CTA Organisations need to use their information and knowledge resources in an efficient and effective manner. Hence the goal of this manual - which is to help build the ICM strategy development skills of agriculture and rural development organisations in ACP countries. Based on a review of work already done in the area, CTA has developed two publications - this Facilitator's guide and a User's manual (see CTA no. 1727). The manuals stress the importance of teamwork, consultation and getting the buy-in of all stakeholders.

Handbook of Accessible Achievement Tests for All Students Bridging the Gaps Between Research, Practice, and Policy

Springer Science & Business Media The Handbook of Accessible Achievement Tests for All Students: Bridging the Gaps Between Research, Practice, and Policy presents a wealth of evidence-based solutions designed to move the assessment field beyond “universal” standards and policies toward practices that enhance learning and testing outcomes. Drawing on an extensive research and theoretical base as well as emerging areas of interest, the volume focuses on major policy concerns, instructional considerations, and test design issues, including: The IEP team’s role in sound assessment. The relationships among opportunity to learn, assessment, and learning outcomes. Innovations in computerized testing and the “6D” framework for standard setting. Legal issues in the assessment of special populations. Guidelines for linguistically accessible assessments. Evidence-based methods for making item modifications that increase the validity of inferences from test scores. Strategies for writing clearer test items. Methods for including student input in assessment design. Suggestions for better measurement and tests that are more inclusive. This Handbook is an essential reference for researchers, practitioners, and graduate students in education and allied disciplines, including child and school psychology, social work, special education, learning and measurement, and education policy.

Islam and Human Rights in Practice

Perspectives Across the Ummah

Routledge Questions over the compatibility of Islam and Human Rights have become a key area of debate in the perceived tensions between ‘Islam and the West’. In many ways, discussion over the stance of Islam in relation to such factors as gender rights, religious freedom, social and political freedoms, and other related issues represents a microcosm of the broader experience of how Muslim and ‘Western’ communities interact and relate. This volume seeks to engage with the various debates surrounding Islam and Human Rights, in particular, challenging assumptions of a ‘standard’ or ‘essential’ Muslim perspective on Human Rights. Through a survey of the experiences of Muslim communities across the globe (the ummah), this volume highlights the dynamic way Muslims understand and incorporate Human Rights into their personal, social and political experiences. From conceptual discussions on the issues of gender rights and religious freedom, to examining Muslim communities from South East Asia, Central Asia, the Middle East and North Africa, leading global experts bring forth key insights into the way in which Muslim communities live and experience Human Rights. The potential for deeper engagement with this issue is critical, as it opens possibilities for more profound understanding and tolerance.

Core Topics in Critical Care Medicine

Cambridge University Press The critical care unit manages patients with a vast range of disease and injuries affecting every organ system. The unit can initially be a daunting environment, with complex monitoring equipment producing large volumes of clinical data. Core Topics in Critical Care Medicine is a practical, comprehensive, introductory-level text for any clinician in their first few months in the critical care unit. It guides clinicians in both the initial assessment and the clinical management of all CCU patients, demystifying the critical care unit and providing key knowledge in a concise and accessible manner. The full spectrum of disorders likely to be encountered in critical care are discussed, with additional chapters on transfer and admission, imaging in the CCU, structure and organisation of the unit, and ethical and legal issues. Written by Critical Care experts, Core Topics in Critical Care Medicine provides comprehensive, concise and easily accessible information for all trainees.

The Posthuman Condition

Consciousness Beyond the Brain

Intellect Books This text addresses the impact of new technology on our ideas about art, science, philosophy and what it is to be human. It argues that many of our beliefs are no longer useful or relevant and we must develop new ways of thinking about and understanding the complexity of contemporary existence.

The Posthuman Condition

Consciousness Beyond The Brain

Intellect Books Synthetic creativity, organic computers, genetic modification, intelligent machines - such ideas are deeply challenging to many of our traditional assumptions about human uniqueness and superiority. But, ironically, it is our very capacity for technological invention that has secured us so dominant a position in the world which may lead ultimately to (as some have put it) ‘The End of Man’. If we are really capable of creating entities that exceed our own skills and intellect then the consequences for humanity are almost inconceivable. Nevertheless, we must now face up to the possibility that attributes like intelligence and consciousness may be synthesised in non-human entities - perhaps within our lifetime. Would such entities have human-like emotions; would they have a sense of their own being? The Posthuman Condition argues that such questions are difficult to tackle given the concepts of human existence that we have inherited from humanism, many of which can no longer be sustained. New theories about nature and the operation of the universe arising from sophisticated computer modelling are starting to demonstrate the profound interconnections between all things in reality where previously we had seen only separations. This has implications for traditional views of the human condition, consciousness, the way we look at art, and for some of the oldest problems in philosophy.

Teratogenesis and Reproductive Toxicology

Springer Science & Business Media The resolution of links between exposure to components of our complex environmental and causation of reproductive effects in the population constitutes an important problem in the field of toxicology. The focus of this volume is developmental toxicology, which represents one aspect of reproductive toxicology dealing with the study of adverse effects on the developing conceptus. Developmental toxicology, which includes teratogenesis as one of its manifestations, provides a fertile field for research in several basic and clinical disciplines; this field also receives input from several disciplines such as developmental and molecular biology, pathology, pharmacology and toxicology, pediatrics and neonatology, and epidemiology. More recently we have seen an emergence of interest in other fields such as perinatal physiology and postnatal behavior which have now become incorporated into the mainstream of research in this discipline. The present volume is an effort to provide a sampling of concepts currently under active investigation in several of the above fields. The authors have endeavored to provide up-to-date information on the following topics: detection and analysis of potential hazards to the conceptus in the workplace, pharmacokinetic aspects of the maternal/placental-fetal complex and its relationship to human birth defects, and probable mechanisms of teratogenesis as uncovered in certain well-defined situations. Also included are summaries of newer investigations on the emerging field of postnatal functional evaluations, i. e. , adverse effects on adult activities resultant from in utero exposure to toxic substances.

Global Midwifery: Principles, Policy and Practice

Springer Nature "This book is the first authoritative, in-depth publication about global midwifery and the contribution of skilled professional midwives to the provision of high quality maternity care, reductions in maternal and newborn mortality and morbidity. It demonstrates actions that are contributing to the achievement of the 2030 Sustainable Development Goals through partnership with women and their families, enabling them to 'survive, thrive and transform'. The book explores how the world is becoming more connected through globalisation, advances in technology and innovation and yet more inequitable as women and children are disproportionately affected by issues such as poverty, environmental vulnerability, hunger, conflict, violence, and discrimination. It considers how midwives contribute to maternal and newborn health, leading to greater equity and empowerment and, ultimately, strengthening health systems. The 'three pillars' of midwifery are discussed: regulation, education and professional midwives' associations. The importance of evidence-based care is explored along with different models of midwifery and the challenges of developing professional leadership. This book also considers women's human rights to sexual and reproductive health and respectful maternity care, stressing the importance of cultural sensitivity and contextually appropriate approaches. Midwives and other professionals will benefit from this reliable resource that indicates direction and provides information about the principles and practice of professional midwifery. This text also provides universities, organisations, and individuals with a highly relevant resource to better equip them for international midwifery practice. It finally offers policy makers a reliable source of evidence-based information for consideration in various evolving national and international situations"--Publisher's description

Global Change and Integrated Coastal Management

The Asia-Pacific Region

Springer Science & Business Media Most of the world's population lives close to the coast and is highly dependent on coastal resources, which are being exploited at unsustainable rates. These resources are being subject to further pressures associated with population increase and the globalization of coastal resource demand. This is particularly so for the

Asia-Pacific region which contains almost two thirds of the world's population and most of the world's coastal megacities. The region has globally important atmospheric and oceanic phenomena, which affect world climate such as the Asian Monsoon and the El-Niño Southern Oscillation phenomena. The Asia-Pacific region also has highly significant marine diversity but over the last few decades, coastal resources such as mangroves, coral reefs and fisheries have experienced large-scale depletion. The need to find appropriate management solutions to these and other coastal issues is made more complex by the need to take account of international scientific predictions for global climate change and sea-level rise which will further impact on these coasts. The idea for this book arose from a meeting of coastal scientists in Kobe, Japan in May 2003. The meeting was organized by the Asia-Pacific Network for Global Change Research (APN), an inter-governmental network, comprising 21 member countries, for the promotion of global change research and links between science and policy making in the region.

Islamic Capital Markets and Products

Managing Capital and Liquidity Requirements Under Basel III

John Wiley & Sons Ensure Basel III compliance with expert analysis specific to Islamic Finance Islamic Capital Markets and Products provides a thorough examination of Islamic capital markets (ICM), with particular attention to the products that they offer and the legal and regulatory infrastructure within which they operate. Since Islamic banks act as asset managers, attention is paid to the regulatory challenges which they face in the light of Basel III, as regards both eligible capital and liquidity risk management. The authors of the chapters are professionals and practitioners, and write from experience. The editors also contributed to some of the chapters. The markets and products covered include Islamic equities, Islamic investment certificates (Sukūk) which are Shari'ah compliant alternatives to conventional bonds, and Islamic Collective Investment Schemes. The coverage of legal and regulatory issues includes an examination of the implications for ICM of securities laws and regulations and of Basel III, as well as collateralisation issues. Shari'ah compliance aspects, in terms both of the selection criteria for Islamic equities and of the 'purification' of impermissible components of income, are also examined in some detail, as are the implications of Basel III for eligible capital in general and for Shari'ah compliant capital instruments in particular. A similar analysis is also made of the implications of the Basel III requirements for liquidity risk management and high quality liquid assets (HQLA), including Shari'ah compliant HQLA. The book concludes with three case studies, two describing the ICM in Malaysia and Bahrain and a third which describes Sukūk issued as Shari'ah compliant capital instruments, followed by brief concluding remarks by the editors.

Modelling and Simulation in Management Sciences

Proceedings of the International Conference on Modelling and Simulation in Management Sciences (MS-18)

Springer This book includes a collection of selected papers presented at the International Conference on Modelling and Simulation in Engineering, Economics, and Management, held at the Faculty of Economics and Business at the University of Girona, Spain, 28-29 June 2018. The conference was organized by the Association for the Advancement of Modelling and Simulation Techniques in Enterprises (AMSE) and the University of Girona with the aim of promoting research in the field of modelling, simulation and management science. This book presents original research studies related to fuzzy logic, soft computing and uncertainty, as well as a number of papers in the field of bibliometrics in social sciences. Presenting new advances in these areas, with a special focus on management, economics and social sciences. It is of great interest to researchers and Ph.D. students working in the field of fuzzy logic, soft computing, uncertainty and bibliometrics.

An ICM Approach to the Assessment of a Medical Ethics Intervention in Thailand

The purpose of this study was to develop and test a new instrument, the Medical Intermediate Concept Measure of Ethical Reasoning (Hereafter the MD-ICM), designed to help educators assess the ethical reasoning of medical students in Thailand. Following earlier methods for developing an ICM measure (e.g., Bebeau & Thoma, 1999), the dissertation first presents the development of the MD-ICM. Specifically, there were four steps used to create the measure: Step 1: identify appropriate ethical dilemmas, Step 2: construction of the items used to assess choice and justification information, Step 3: obtaining expert evaluation of the ethical dilemmas and assessment items. and Step 4: Testing for reliability and validity. Reliability and Validity of the measure was assessed in a sample of 627 Thai Medical Students representing seven different universities. These students were in the first three years of medical training. Quantitative analysis (e.g., descriptive statistics, simple correlation, ANOVA, and regression analysis) was used to answer four research questions. The findings from this study are; 1) the MD-ICM was able to distinguish medical students who differ in medical ethics instruction and experience in the medical profession. Superficially, third year students scored higher than second year and first year students respectively. Further females scored higher on the MD-ICM across years and schools. 2) MD-ICM scores differed between students experiencing two types of professional ethics instruction. Students experiencing a specific course in medical ethics scored higher than students from schools who have adopted an integrated program. 3) MD-ICM scores relate to established measures of moral judgment development supporting the

convergent validity of the measure. Further, the results of these analysis indicates that the MD-ICM offers information that is not redundant with these established measures., and 4) the relationship between MD-ICM scores and supporting measures did not vary by gender. Results are discussed in terms of the applicability of the MD-ICM approach to the assessment of professional ethics education.

Out of the Box, or Out of the Question: What Won't Your Incentive Compensation Management System Do?

Lulu Press, Inc As you embark upon your Incentive Compensation Management system implementation, it is important to have realistic expectations about what the system can, and cannot, do. This highly accessible book takes you through common gaps in ICM system functionality that can impact the success of your system. David Kelly, the Compensation Architect, has been working with customers to implement ICM systems since the late 1990s. He brings a perspective to projects that goes beyond technology. He believes the first priority is to identify the fundamental business problems that must be solved, and only then is it time to start thinking about the best tools to use for a solution. Mr. Kelly is the author of "The Book on Incentive Compensation Management: The Systematic Administration of Variable Compensation in the Enterprise" (Compensation Architect, 2014).
