#### Never Look a Polar Bear in the Eye

#### A Family Field Trip to the Arctic's Edge in Search of Adventure, Truth, and Mini-Marshmallows

*Hachette+ORM* In this humorous mix of travelogue and memoir, a writer temporarily moves his California family north to Canada's Polar Bear Capital of the World. Welcome to Churchill, Manitoba. Year-round human population: 943. Yet despite the isolation and the searing cold here at the arctic's edge, visitors from around the globe flock to the town every fall, driven by a single purpose: to see polar bears in the wild. Churchill is "The Polar Bear Capital of the World." And for one unforgettable "bear season," Zac Unger, his wife, and his three children moved from Oakland, California, to make it their temporary home. But they soon discovered that it's really the polar bears who are at home in Churchill, roaming past the coffee shop on the main drag, peering into garbage cans, scratching their backs against fence posts and front doorways. Where kids in other towns receive admonitions about talking to strangers,

Churchill schoolchildren get “Let’s All Be Bear Aware” booklets to bring home. (Lesson number 8: Never explore bad-smelling areas.) Zac Unger takes readers on a spirited and often wildly funny journey to a place as unique as it is remote, a place where natives, tourists, scientists, conservationists, and the most ferocious predators on the planet converge. In the process he becomes embroiled in the controversy surrounding “polar bear science”—and finds out that some of what we’ve been led to believe about the bears’ imminent extinction may not be quite the case. But mostly what he learns is about human behavior in extreme situations . . . and also why you should never even think of looking a polar bear in the eye.

## The Last Polar Bear

## Facing the Truth of a Warming World

*Braided River* Scientists agree that by the end of this century the polar bear will be the first mammal threatened with extinction due to climate change. "The Last Polar Bear" is the first book to fully document that story. The continued survival of these magnificent white bears in their warming, and melting, Arctic world is uncertain, yet their fate is also a wake-up call compelling us to act now to stem global warming. Through Steven Kazlowksi's unparalleled imagery, the most critical environmental issue of our time is brought to life. "The Last Polar Bear" places the reality of climate change in our hands. We see the plight of the polar bear, an animal already feeling the detrimental effects of our reliance on fossil fuels, as its icy habitat melts. Over the course of the last six years, wildlife photographer Steven Kazlowksi has photographed the polar bear in its wild habitat, from Hershel Island in Canada to Point Hope in Alaska. "The Last Polar Bear" pairs his intimate images with anecdotes about his Arctic adventures, as well as authoritative essays about the polar bear in the context of climate change. Alaska based writers Richard Nelson, Charles Wohlforth, Nick Jans, and leading USGS polar bear biologist Steven C. Amstrup draw on decades of experience in the Arctic to cover the biological, cultural, and anthropological aspects of climate change. Dan Glick, long-time correspondent for "Newsweek", addresses the history of climate change while Frances Beinecke, president of the Natural Resources Defence Council, and Theodore Roosevelt IV offer perspectives on activism and politics.

## Polar Human Biology

# The Proceedings of the SCAR/IUPS/IUBS Symposium on Human Biology and Medicine in the Antarctic

*Butterworth-Heinemann* Polar Human Biology documents the proceedings of the SCAR/IUPS/IUBS Symposium on Human Biology and Medicine in the Antarctic held at the Scott Polar Research Institute, Cambridge, England on September 19-21, 1972. This book compiles review papers of expeditions conducted by several scientists, demonstrating the multidisciplinary aspects of the work carried out in both polar regions. The first portion of the compilation describes the problems encountered by Antarctic expeditions in the 1930s and today, which illustrates the tremendous changes in the way in which Antarctic expeditions operated then and now. Following the review papers, medical and dental aspects are also described, including a brief discussion on microbiology. The final section of this book deals with psychological and behavioral aspects, indicating that the interpretation of physiological studies of the effects of cold on man would be greatly helped by knowledge of the psychological effects of the polar situation. This text is a good reference for students or individuals conducting research on human and marine biology in the Antarctic regions.
