Caring for Lesbian and Gay People A Clinical Guide University of Toronto Press
*What should you say if your patient is struggling with her sexuality? How do you respond to your married patient when he discloses to you his same-sex sexual history? To which medical studies do you turn when you need to know more about club drugs? As physicians and health professionals, you want to provide the best possible care for your patients, but medical schools and other health care teaching institutions do not generally provide comprehensive information on how to approach caring for sexual-minority patients. Allan D. Peterkin and Cathy Risdon have written Caring for Lesbian and Gay People ? the first medical guide to offer busy clinicians practical, accessible, and evidence-based information to help in the care of gay and lesbian patients. The authors begin with an overview of the history of medical relations with lesbian and gay patients, providing advice and guidelines for strengthening the doctor-patient relationship and raising the standard of care for all patients. The book then delves into a range of specific clinical issues, such as risk profiles for particular illnesses, screening for and managing sexually transmitted infections, and HIV in the primary care setting. Subsequent chapters cover such wide-ranging topics as mental health care and the effect of homophobia on relationships, same-sex parenting, the role that body image plays in health, and unique populations, such as lesbian and gay ethno-racial minorities, the transgendered, rural lesbian and gay people, and elders. Each chapter includes practical tips (advice on inclusive language, for example) and summaries, along with references, of written and online resources. Comprehensive and detailed, this work covers physical and mental health across the life cycle, with equal emphasis on women's and men's health. Based on more than twenty years of patient care and contributions to medical education and community development, this indispensable resource will greatly heighten the quality of care clinicians, health care practitioners, and educators can provide to their patients, and will in turn provide patients and consumers with the means to take an active role in their own health care. **Called to Care A Medical Provider's Guide for Humanizing Healthcare** What is the*

golden standard of healthcare today? It's an important question. As a medical professional, you operate in a more disconnected environment than your predecessors. Compliance standards and excessive documentation keep you in front of computers instead of patients, and low reimbursement rates mean packing the day with appointments and sacrificing quality of care. Dr. Larry Benz is finding ways to humanize healthcare again. In *Called to Care*, he shows you how to ignore constraints and build quality connections by treating patients as people, not numbers. He and his team know that patients who feel heard are more engaged in their treatment; more patient engagement equals better outcomes for everyone. Dr. Benz helps you reach new heights as a provider by helping you break out of your current cycle, renew your purpose, and improve the patient experience. This is a book about reconnection. Find out how to reclaim your compassion, restore your patient relationships, and revive your calling.

Clinical Guidelines in Primary Care
A Guide to the Clinical Care of Women with HIV HIV/AIDS Bureau **EBOOK: A Practical Guide to End of Life Care** McGraw-Hill Education (UK)

Are you involved in caring for people at the end of their life? Do you have a role in supporting the families of those who are dying, or is this an area of your work you find personally difficult? This book is an accessible guide for all those working in health or social care and caring for people at the end of their lives. This will include people in roles such as healthcare assistant, hospice worker, volunteer, nurse or other carers. Written by experts with extensive experience in delivering high quality end of life care, this book is full of real life examples, reflection exercises and case studies. It also includes insights into what can help make a good death, and how to help support families at the end of life. The easy to read chapters emphasise treating people who are dying with dignity using a person centred approach. The book supports the delivery of quality care by recognising physical and non-physical symptoms, and thinking about various emotional and physical needs people might have. It is also important that care givers look after themselves and advice is given on how best to do this. An essential purchase for anyone looking for guidance or support in this area, and suitable for those working in the community, care homes, hospices, hospitals or other settings where people are cared for. With a Foreword from Dr. Ros Taylor, MBE, National Director for Hospice Care, Hospice UK. "This is a beautifully presented learning tool to support the delivery of end of life care. I particularly like the 'signposts' which reinforce the intention of the book to enable 'carers' to apply what they read to their role in practice." Liz Bryan, Director of Education and Training, St Christopher's Hospice, UK "This book is a very welcome addition to the literature on end of life care, as it does exactly what it says - it is a practical guide. It is written by an inter-professional group of clinical experts who have managed to create a concise, accessible resource which would be perfect for carers, volunteers, Health Care Support Workers or health care student working in any clinical setting who wants to make a difference for individuals approaching the end of their lives. The book addresses all of the important aspects of care at this crucial time, including attitudes to death and dying, communication issues, common physical and psycho-social symptoms, and care in the last hours of life. The case studies of three individuals are threaded throughout the book and are an excellent way to illustrate theoretical content and demonstrate its clinical application. The

glossary of terms is particularly useful for a non-specialist audience, as are the resources for further reading. I particularly welcome the use of 'signposts' to different activities at key points which encourage the reader to reflect and apply the knowledge to their own situation. I highly recommend this book to any individual who wants to develop their confidence and competence in this challenging, but critically important area of care." Mick Coughlan, Programme Leader, The Royal Marsden School, UK "I found the chapters easy to read and the link to a case study really brought the words 'to life'. The chapter on self-care was helpful – this is an area hospice managers are having to focus on in detail as our staff strive to maintain the high levels of quality care hospices are renowned for with compassion and dignity . Giving emotional support throughout a shift to patients, families and colleagues can lead to a feeling of 'exhaustion' and 'fatigue', which if not recognised and addressed leads to time off sick and a feeling of being 'powerless' for staff . Healthcare professionals must recognise this as well as their managers, who then need to provide different levels of interventions that staff can access – as described in the book. I think all palliative care libraries should have this book on their shelves and perhaps it could be a 'core' reading book for training. I also used it on the ward to discuss with nurses – it's not that what is written is necessarily new but it is well written, concise and relevant. I feel this book would be very useful for those new to palliative care as well as those studying the subject. Relating theory to practice is always powerful and for new nurses and other healthcare professionals this provides context and meaning." Clodagh Sowton, Director of Patient Services, Phyllis Tuckwell Hospice Care, UK "This is a welcome book to the field of end of life care. This practical guide is accessible and is an excellent bridge between the 'Lay Person' and those health care professionals caring for the individual as they approach the end of life. The authors present their subject areas in a most readable and engaging style. While reviewing the case studies (which are weaved throughout the whole book); you feel they have come from experienced carers who have had 'lived experiences' of end of life care. This therefore, makes the chapters much more relatable and applicable to practice and real world life. This is also a personable book and I would recommend it to health care professionals and lay persons alike- who need to address or who may require further insight into the realms of: Physical/psycho-social symptoms, communication challenges and differential perspectives on dying and death. Finally, I will also be directing students of healthcare towards this impressive, insightful book." Robert Murphy, Senior Lecturer - Adult Nursing, London South Bank University, UK "The material covered is very helpful and the range of authors has been well selected from individuals who are active in clinical practice. The book is practical and clear, and Clair deserves high praise for the contribution it will make to clinicians seeking to improve their palliative care knowledge and skills." The Art and Science of Personalising Care with Older People with Diabetes Springer This unique book is intended for all health professionals caring for older people with diabetes such as specialist and general nurses, doctors, primary care practitioners and dietitians. Although there is an increasing body of work about personalised care, no publications were identified that encompass the focus and scope of the proposed book. The global population is ageing and increasing age is a key risk factor for diabetes. Older people with diabetes are often vulnerable, have complex care needs and often have cognitive changes, which makes personalising care challenging for health professionals. Thus, this is an internationally relevant book filling a gap in the current literature. This is a practical and updated book that will use an engaging and easy to read narrative style. It challenges readers to reflect in and on their practice. It encompasses people with diabetes' and authors' stories, which are known to have a special interest to readers, make it easier to apply the information to practice, enhance learning, and hence the relevance and value of the book. It is relevant to advocacy organisations as well as managers and service planners. Researchers and scientists may find relevant information on grant and ethics applications, research protocols, plain language statements for potential participants and operationalising research protocols.

Medical ethics allow for people, regardless of background, to be guaranteed quality and principled care. It is based on a set of values that professionals can refer to in the case of any confusion or conflict. These values include the respect for autonomy, non-maleficence, beneficence, and justice. These tenets allow doctors, care providers, and families to create a treatment plan and work towards the same common goal without any conflict. Succeeding in the healthcare field means more than just making a diagnosis and writing a prescription. Healthcare professionals are responsible for convincing patients and their family members of the best course of action and treatments to follow, while knowing how to make the right moral and ethical choices. Ethical teaching should be an active part of training and should be taught in four division: basic ethics, clinical ethics, legal principles related to ethics and the ethics of research and affiliation. This book is a reference guide for physicians, healthcare providers and administrative staff. It looks at the ethical problems they face every day, gives the background and the ethical problem and then provides practical advice which can be easily implemented. This book provides the knowledge needed to understand who has the right to healthcare, the justice of clinical practice, what autonomy means for a patient giving consent, who is going to make any surrogate decisions and more. **A Clinician's Guide to Gender-Affirming Care Working with Transgender and Gender Nonconforming Clients** New Harbinger Publications Transgender and gender nonconforming (TNGC) clients have

complex mental health concerns, and are more likely than ever to seek out treatment. This comprehensive resource outlines the latest research and recommendations to provide you with the requisite knowledge, skills, and awareness to treat TNGC clients with competent and affirming care. As you know, TNGC clients have different needs based on who they are in relation to the world. Written by three psychologists who specialize in working with the TGNC population, this important book draws on the perspective that there is no one-size-fits-all approach for working with TNGC clients. It offers interventions tailored to developmental stages and situational factors—for example, cultural intersections such as race, class, and religion. This book provides up-to-date information on language, etiquette, and appropriate communication and conduct in treating TGNC clients, and discusses the history, cultural context, and ethical and legal issues that can arise in working with gender-diverse individuals in a clinical setting. You'll also find information about informed consent approaches that call for a shift in the role of the mental health provider in the position of assessment and referral for the purposes of gender-affirming medical care (such as hormones, surgery, and other procedures). As changes in recent transgender health care and insurance coverage have provided increased access for a broader range of consumers, it is essential to understand transgender and gender nonconforming clients' different needs. This book provides practical exercises and skills you can use to help TNGC clients thrive.

*The STANDARD MEDICAL OPERATING GUIDELINES (SMOG) continues to go through significant improvements with each release as a result of the collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, and the Defense Committees on Trauma. Our shared goal is to ensure the highest quality en route care possible and to standardize care across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. Unit medical trainers and medical directors should evaluate Critical Care Flight Paramedics (CCFP) ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide CCFPs and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and combat theater environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director (supervising physician) orders a deviation. Other medications may be added, so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction, which is more appropriate to the patient's condition than the guideline, should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. The Standard Medical Operating Guidelines are intended to provide medical procedural guidance and is in compliment to other Department of Defense and Department of the Army policies, regulatory and doctrinal guidance. Nothing herein overrides or supersedes laws, rules, regulation or policies of the United States, DoD or DA. **A Practical Guide to Global Point-of-Care Testing** CSIRO PUBLISHING Point-of-care testing (POCT) refers to pathology testing performed in a clinical setting at the time of patient consultation, generating a rapid test result that enables informed and timely clinical action to be taken on patient care. Preventive Medical Care in Psychiatry A Practical Guide for Clinicians American Psychiatric Pub Preventive Medical Care in Psychiatry: A Practical Guide for Clinicians was written for psychiatrists in training and in clinical practice, as well as other health care providers who wish to learn an evidence-based and user-friendly approach to prevent commonly encountered, treatable, and potentially deadly illnesses in their patients. The poor health and early mortality of people with serious mental illnesses has been well documented: People who have serious mental illness have increased general medical comorbid conditions, receive minimal preventive medical services, and have a reduced life span of as much as thirty years when compared to the general population. In addition, there is now extensive data showing bidirectional interactions between chronic medical illnesses and mental disorders. Clearly, treating the whole person, instead of the disorder in isolation, is critical to improving outcomes and reducing suffering. The book's logical structure makes it easy to use, with sections devoted to general principles of preventive psychiatry, cardiovascular and pulmonary disorders, endocrine and metabolic disorders, infections disorders, and oncologic disorders. In addition, the volume: Provides evidence-based approaches to care across the prevention spectrum, from primary prevention (how to keep people healthy), to secondary prevention (how to detect early signs of common illnesses), through tertiary prevention (how to prevent disability and adverse outcomes once patients develop medical problems). Informs clinicians about how to more effectively interface with general medical practitioners, and instructs

them in providing screening for common medical problems, as well as ensuring that preventive measures, such as vaccinations, are performed. Covers, in a section addressing "special topics," child, adolescent, and geriatric populations, as well as strategies for assessing and managing chronic pain. Concludes with an appendix that features a health questionnaire, Preventive Medicine in Psychiatry (PMAP), for use in screening and follow-up, and a handy summary of age based preventive medicine recommendations, references to which clinicians will return repeatedly. The Affordable Care Act has provided mental health practitioners with new opportunities to develop integrated models of care that better serve patients and populations, furthering the existing trend of treating the whole patient. Preventive Medical Care in Psychiatry: A Practical Guide for Clinicians is a critical resource which will prove indispensable to clinicians dedicated to improving the quality of life and longevity for patients who suffer from serious mental illness. Twenty-five percent of royalties help support Resident-Fellow Members (RFM) within the California Psychiatric Association. **OECD Reviews of Health Care Quality: Sweden 2013** OECD Publishing This report reviews the quality of health care in Sweden.
