Nikon D850 User Manual

The Complete and Illustrated Guide for Beginners and Seniors to Master the D850

An All in One Guide to Master your Nikon D850 The Nikon D850 is a high resolution full-frame DSLR, boasting a 46MP backside-illuminated CMOS sensor. But, in a fairly radical departure for the series, it is also one of the company's fastest-shooting DSLRs. This combination of properties should significantly widen the camera's appeal to high-end enthusiasts as well as a broad range of professional photographers. The use of a backside illuminated (BSI) sensor means that the light collecting elements of the sensor are closer to the surface of the chip. This should not only increase the efficiency of the sensor (improving low light performance) but should also be expected to make the pixels near the edges of the sensor better able to accept light approaching with high angles of incidence, improving peripheral image quality. Taking the perfect shot requires more than just years of experience and good lighting! Knowing Your camera and what it offers you is a primary requirement, and this Nikon D850 manual provides clear, step by step instructions to help you take full advantage of your camera. Here's a preview of what you'll learn Learn about each button on your camera Understand the settings Get better photos in auto or manual mode Shoot, view, and edit movies Whatever the occasion you're shooting for, you'll get all the guidance you need to take excellent photos from now!

Nature Spirits, Spirit Guides, and Ghosts

How to Talk with and Photograph Beings of Other Realms

Quest Books Boulders laugh, trees talk, and practically each patch of ground has meaning, in Atala Toy's experience. Faeries, angels, ghosts, orbs, and spirits of place are just some of the life forms with which she helps us attune-and shows us how to record their image! Readers will cherish her rare combination of esoteric wisdom and practical guidance. With substantive clarity, she explains time travel, portals, dowsing, negative and positive vortexes, balls of energy known as merkabahs, ley lines, and orbs-the plasma of some life form visible to human eyes or to cameras, many of which are nature spirits who enjoy being around happy energy and so are often seen at parties and spiritual gatherings. A professional interdimensional communicator, Atala is up to the minute in her understanding of the emerging field of spiritual sciences and the correlations between modern physics and ancient metaphysical traditions that perceive the oneness of all nature. We all communicate interdimensionally every day, she says. We just don't know it, and so we lose out on the many ways to receive help from the other life forms who share our space. Drawing on her own and her clients' experiences, she teaches through colorful stories and her own powerful photographs. Titles include "The Ghost Who Washed Dishes," "The Haunted Hotel," "The Guardian of the Spring," "The Horse Who Knew More Than His Owners," "The Jilted House," "The Stranded Gnome," "The Moss Faery," "The Owl on Turtle Island," and "The Balsam Who Loved the Birch." She also includes lessons explaining the energetic principles of the situation; simple exercises for mastering the principle contained in the story; and tips for photographing other life forms using technology available to anyone, such as digital or even cell phone cameras. By entering the fascinating realm of this book, the reader will join the growing number of people aware of subtle energy and able to see through the veils between dimensions. Not only is this possibility personally enriching, it serves a broader purpose as well. Needless to say, the planet and everything on it is at a critical juncture. In damaging the earth, we have damaged the nature beings' home as well. It is therefore strongly in their interest to assist us in transforming the earth into something better. This book shows us how to learn from and enjoy them in a most delightful way

Parentology

Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask

Simon and Schuster An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
