Art Education Applied to Industry (Classic Reprint)

Forgotten Books Excerpt from Art Education Applied to Industry The object of this book is to show the present need of art education in the United States; to relate something of its history in Europe; to explain what is meant by its application to industry; and to propose a method of instruction best adapted to our people and institutions. The broad meaning of the term art education has not always been understood. It is most often used in its relation to the fine arts of painting, sculpture, and architecture, as if these higher arts and the industries were not mutually dependent, or as if the boundary which is supposed to separate them were not, in all three of the arts, constantly invaded, so that often the product of the industry may be called a work of art. (Classic Reprint)

Forgotten Books Excerpt from Chemical Technology, Vol. 2: Or, Chemistry, Applied to the Arts and to Manufactures Our fourth group contains much information which is new to the great bulk of the English public, in which the recent researches of Fuchs, Kuhlmann, and others, are explained, and their application to the manufacture of cements and artificial foundations detailed at some length. We have also added one or two sections on the manufacture of magnesian salts, which are carried on to a very great extent in this country, itt consequence of the peculiar facilities which it ofl'ers for the production of these articles. While our friend, Dr. Knapp, is engaged in the preparation of another volume on articles of food, &c., we have undertaken that branch of Technology, more appropriately known as Metallurgy and the Chemistry of the Metals, to ensure the least possible delay in the completion of the entire work.
