This book provides analysis of the main issues, offering solutions and describing good practice. **Water Resources for the Built Environment: management issues and solutions** develops an appreciation of the diverse, complex and current themes of the water resources debate across the built environment, urban development and management continuum. The integration of physical and environmental sciences, combined with social, economic and political sciences, provide a unique resource, useful to policy experts, scientists, engineers and subject enthusiasts. By taking an interdisciplinary approach, water resources issues and impacts on the built environment are presented in the inventive and strategic setting of considering the constraints of delivering potable water to an ever-demanding society who, at the same time, are increasingly aware of living in an urban landscape where excessive surface water creates a flood-threatened environment - hence, the need to portray a balance between 'too little vs. too much'. This unique approach to the water resources debate presents a multifaceted collection of chapters that address the contemporary concomitant issues of water shortage and urban flooding and proffers solutions specifically for the built environment. The book is structured into three parts: the first part (Sections 2, 3 and 4) addresses management issues and solutions to minimise water shortages and provide water security for society; whilst the second part of the book (Sections 5 and 6) addresses management issues and solutions to control excessive rainfall and minimise flooding impacts. The third part (Section 7) contextualises the issues of the earlier sections within international case studies from the developing world. **The Age-friendly Lens** *Taylor & Francis* This book engages with the concept of age-friendly environments, adopting multi-perspectivity to demonstrate how age-friendly environments can contribute to shifting how we think, feel and act toward issues of age and ageing and operate as a vehicle to improve understandings of ageism. Drawing from traditionally distinct fields, the text demonstrates theoretical and applied dimensions of the age-friendly global agenda, with several chapters discussing topics that have to date been underrepresented in age-friendly scholarship, including education, health and justice systems. The case studies encourage critical engagement with the issue of ageism in age-friendly scholarship. It presents a clear understanding of the inequalities, challenges and opportunities of ageing and of the ways international, regional, national and sub-national commitments in health, development and human rights, and are further impacted by, ageing through designing, implementing, monitoring and evaluating policies and programmes. The essays utilise a critical and interdisciplinary dialogue to enhance discussion of the age-friendly environment agenda through the inclusion of age-friendly perspectives in addition to its processes and destinations in an ageing society. The book serves as a catalyst to stimulate research, policy and public interest in the physical, social and regulatory environments in which we age and the consequent impact upon health and well-being. It will be of interest to professors, graduate students and undergraduate students in policy, sociology, health, planning and gerontology. It is also recommended reading for policy makers, politicians, think tanks and lobbyists, who are concerned with age-all-age-inclusiveness. **Guide to U.S. Environmental Policy** *CQ Press* Guide to U.S. Environmental Policy provides the analytical connections showing readers how issues and actions are translated into public policies and persistent institutions for resolving or managing environmental conflict in the U.S. The guide highlights a complex decision-making cycle that requires the cooperation of government, business, and an informed citizenry to achieve a comprehensive approach to environmental protection. Many signs point to yes. China, the world's largest carbon emitter, is leading a global clean energy revolution, phasing out coal consumption and leading the development of a global system of green finance. But as leading China environmental expert Barbara Finamore explains, it is anything but easy. The fundamental economic and political challenges that China faces in addressing its domestic environmental crisis threaten to derail its low-carbon energy transition. Yet there is reason for hope. China's leaders understand that transforming the world's second largest economy from one dependent on highly polluting heavy industry to one focused on clean energy, services and innovation is essential, not only to the future of the planet, but to China's own prosperity. *A Long Walk to Water* Based on a True Story Houghton Mifflin Harcourt When the Sudanese civil war reaches his village in 1985, 11-year-old Salva becomes separated from his family and must walk with other Dinka tribe members through southern Sudan, Ethiopia and Kenya in search of safe haven.
