ACCOUNTING INFORMATION SYSTEMS, GLOBAL EDITION

THE DIGITAL TRANSFORMATION OF AUDITING AND THE EVOLUTION OF THE INTERNAL AUDIT

Taylor & Francis **The main objective of this book is to provide both academics and practitioners with a global vision of the evolution of internal auditing in a fast-changing business landscape driven by digital transformation. Digital transformation has been first associated with the emergence and the development of new technologies (artificial intelligence, blockchain, cloud computing, data analytics, predictive analytics, robotic process automation, IOT, drones etc.). Beyond the technological dimensions, this transformation has several impacts on businesses, organizations and processes and raises several questions for auditing activities. This book**

explores how digitalization not only has an impact on the audit environment, but also on internal audit practices and methodologies, information technology (IT)/information system (IS) audit, IT governance and risk management. The auditing profession also has to face the same challenges. Auditors should develop new skills. To continue to provide high quality service in such an environment, the methodologies, the process and the tools used for conducting an audit have progressively changed from those applied to the traditional audit. Internal audit, as a key strategic function, must evolve too. Finally, the book also investigates the impact of the COVID-19 pandemic on internal auditing. The author highlights the need for a new vision and renewed forecasting tools. The post-COVID-19 business and corporate world has changed. Internal audit, as a key strategic function, must evolve too.

PROCEEDINGS OF THE XVII INTERNATIONAL SYMPOSIUM SYMORG 2020

BUSINESS AND ARTIFICIAL INTELLIGENCE

FON Ever since 1989, the Faculty of Organizational Sciences, University of Belgrade, has been the host of SymOrg, an event that promotes scientific disciplines of organizing and managing a business. Traditionally, the Symposium has been an opportunity for its participants to share and exchange both academic and practical knowledge and experience in a pleasant and creative atmosphere. This time, however, due the challenging situation regarding the COVID-19 pandemic, we have decided that all the essential activities planned for the International Symposium SymOrg 2020 should be carried out online between the 7th and the 9th of September 2020. We are very pleased that the topic of SymOrg 2020, "Business and Artificial Intelligence", attracted researchers from different institutions, both in Serbia and abroad. Why is artificial intelligence a disruptive technology? Simply because "it significantly alters the way consumers, industries, or businesses operate." According to the European Commission document titled Artificial Intelligence for Europe 2018, AI is a key disruptive technology that has just begun to reshape the world. The Government of the Republic of Serbia has also recognized the importance of AI for the further development of its economy and society and has prepared an AI Development Strategy for the period between 2020 and 2025. The first step has already been made: the Science Fund of the Republic of Serbia, after a public call, has selected and financed twelve AI projects. This year, more than 200 scholars and practitioners authored and co-authored the 94 scientific and research papers that had been accepted for publication in the Proceedings. All the contributions to the Proceedings are classified into the following 11 sections: Information Systems and Technologies in the Era of Digital Transformation Smart Business Models and Processes Entrepreneurship, Innovation and Sustainable Development Smart Environment for Marketing and Communications Digital Human

Resource Management Smart E-Business Quality 4.0 and International Standards Application of Artificial Intelligence in Project Management Digital and Lean Operations Management Transformation of Financial Services Methods and Applications of Data Science in Business and Society

We are very grateful to our distinguished keynote speakers: Prof. Moshe Vardi, Rice University, USA, Prof. Blaž Zupan, University of Ljubljana, Slovenia, Prof. Vladan Devedžić, University of Belgrade, Serbia, Milica Đurić-Jovičić, PhD, Director, Science Fund of the Republic of Serbia, and Harri Ketamo, PhD, Founder & Chairman of HeadAI Ltd., Finland. Also, special thanks to Prof. Dragan Vukmirović, University of Belgrade, Serbia and Prof. Zoran Švarac, University of Belgrade, Serbia for organizing workshops in fields of Data Science and Machine Learning and to Prof. Rade Matić, Belgrade Business and Arts Academy of Applied Studies and Milan Dobrota, PhD, CEO at Agremo, Serbia, for their valuable contribution in presenting Serbian experiences in the field of AI. The Faculty of Organizational Sciences would to express its gratitude to the Ministry of Education, Science and Technological Development and all the individuals who have supported and contributed to the organization of the Symposium. We are particularly grateful to the contributors and reviewers who made this issue possible. But above all, we are especially thankful to the authors and presenters for making the SymOrg 2020 a success!

RECENT ADVANCES IN INTERNET OF THINGS AND MACHINE LEARNING

REAL-WORLD APPLICATIONS

[Springer Nature](#) This book covers a domain that is significantly impacted by the growth of soft computing. Internet of Things (IoT)-related applications are gaining much attention with more and more devices which are getting connected, and they become the potential components of some smart applications. Thus, a global enthusiasm has sparked over various domains such as health, agriculture, energy, security, and retail. So, in this book, the main objective is to capture this multifaceted nature of IoT and machine learning in one single place. According to the contribution of each

chapter, the book also provides a future direction for IoT and machine learning research. The objectives of this book are to identify different issues, suggest feasible solutions to those identified issues, and enable researchers and practitioners from both academia and industry to interact with each other regarding emerging technologies related to IoT and machine learning. In this book, we look for novel chapters that recommend new methodologies, recent advancement, system architectures, and other solutions to prevail over the limitations of IoT and machine learning.

EXPERT SYSTEMS IN FINANCE

SMART FINANCIAL APPLICATIONS IN BIG DATA ENVIRONMENTS

Routledge Throughout the industry, financial institutions seek to eliminate cumbersome authentication methods, such as PINs, passwords, and security questions, as these antiquated tactics prove increasingly weak. Thus, many organizations now aim to implement emerging technologies in an effort to validate identities with greater certainty. The near instantaneous nature of online banking, purchases, transactions, and payments puts tremendous pressure on banks to secure their operations and procedures. In order to reduce the risk of human error in financial domains, expert systems are seen to offer a great advantage in big data environments. Besides their efficiency in quantitative analysis such as profitability, banking management, and strategic financial planning, expert systems have successfully treated qualitative issues including financial analysis, investment advisories, and knowledge-based decision support systems. Due to the increase in financial applications' size, complexity, and number of components, it is no longer practical to anticipate and model all possible interactions and data processing in these applications using the traditional data processing model. The emergence of new research areas is clear evidence of the rise of new demands and requirements of modern

real-life applications to be more intelligent. This book provides an exhaustive review of the roles of expert systems within the financial sector, with particular reference to big data environments. In addition, it offers a collection of high-quality research that addresses broad challenges in both theoretical and application aspects of intelligent and expert systems in finance. The book serves to aid the continued efforts of the application of intelligent systems that respond to the problem of big data processing in a smart banking and financial environment.

ACCOUNTANCY AND SOCIAL RESPONSIBILITY

AN INNOVATIVE NEW APPROACH TO ACCOUNTANCY THEORY AND PRACTICE

[Springer Nature](#) Accountancy encompasses much more than is normally considered, especially from a social responsibility point of view. This book brings fresh ideas and an innovative approach to accountancy theory and practice as well as critical views about professional thinking in accountancy. The reader will find advanced approaches regarding usiness objectives with social responsibility principles. A new role of accountancy is founded for a sustainable society. The responsibility of individuals is emphasized through behavioural analysis. The book has an interdisciplinary character and will be interesting for students, doctoral students, academics and practitioners as well. The real thread of the book is the risk and responses to the feelings of risk in organizations and also of individuals. On this basis a new role and a new structure of accountancy is offered.

APPLICATIONS OF BLOCKCHAIN AND BIG IOT SYSTEMS

DIGITAL SOLUTIONS FOR DIVERSE INDUSTRIES

STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

THE ROUTLEDGE COMPANION TO ACCOUNTING IN EMERGING ECONOMIES

Routledge As researchers reveal the increasing complexities of accounting practices in emerging economies, there is a growing need for an overview of the topic. The Routledge Companion to Accounting in Emerging Economies is a prestige work offering an introduction to current scholarship in the field, with indications of future directions for enhancing the contribution to knowledge. With regional coverage of key emerging economies such as Brazil, Russia, India and China, the team of contributors analyse issues in accounting in detail, while shedding light on the role of the accounting profession in providing accountability and governance across the developing world. Each chapter is headed up by an internationally recognised author who is a leading expert in designing and implementing research approaches to the topic. Within the team of

authors, some are experienced senior contributors while others are developing new avenues of exploration on the basis of high-quality doctoral study. This range of author experience has been deliberately chosen to allow the reader to envisage working in such a team while growing in confidence. This unique reference offers a comprehensive guide to advanced students, academics, practitioners and policy makers on the current state of, and potential developments in, accounting in developing economies globally. This work will be of particular interest to students and researchers looking to identify topics in emerging economies, academics and practitioners seeking convenient access to an unfamiliar area, and established researchers seeking a single repository on the current state of knowledge, current debates and relevant literature.

NATIONAL ACCOUNTS AND ENVIRONMENTALLY SUSTAINABLE NATIONAL INCOME

Eburon Uitgeverij B.V. This book looks at some key economic aspects of the environment. Our planet is threatened by a wrong belief in a wrongly formulated growth. The term “economic growth” can only mean an increase in welfare but is often wrongly identified with production growth that may be destructive to the environment. The figure of standard national income (NI) or Gross Domestic Product (GDP) is useful for many purposes but inadequate for environmental policy making. This book develops the concept of an environmentally Sustainable National Income (eSNI). eSNI is defined as the maximally attainable level of production, using the technology of the year under review, whereby the vital environmental functions (possible uses) of the not-human-made physical surroundings remain available for future generations. Judgement of environmental sustainability requires that both NI and eSNI are looked at jointly, alongside each other. The distance $e\Delta = NI - eSNI$ provides the relevant information about environmental sustainability. Calculations for the Netherlands for 1990-2015 provide a proof of concept. National statistical bureaus around the world are advised to provide this information for their own countries, so that policy making around the world can use sound information about the national economies and the global environment. Dr Roefie Hueting (1929) is an economist and was head of the department of environmental statistics at CBS Statistics Netherlands.

Ir Bart de Boer (1947) is an electrotechnical engineer who applied systems analysis to environmental issues and sustainability.

MANAGING CLIMATE RISK IN THE U.S. FINANCIAL SYSTEM

U.S. Commodity Futures Trading Commission **This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious emerging risks to the U.S. financial system, and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data and tools to better monitor, analyze, and quantify climate risks. It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible, open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive—it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations, in the form of new financial products, services, and technologies, can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition. <https://doi.org/10.5281/zenodo.5247742>**
