60 Years of Survival Outcomes at The University of
Texas MD Anderson Cancer Center

Springer Science & Business Media This unique book provides a retrospective analysis of the changes in survival outcomes at the University of Texas, M.D. Anderson Cancer Center over the past six decades. Since opening its doors in 1944, M.D. Anderson has kept a continuous, uninterrupted data repository of the treatment and outcomes of each of its patients. It is this visionary database from the center's tumor registry which makes this groundbreaking book possible. Tracking results across time, this book shows radical shifts in outcomes trends, where great progress has been made, and where there is still a long way to go, and offers a snapshot into the parallel history of developments in care. Such data is crucial to informing how patients are counseled, how treatment decisions are determined, and how prognoses are made. 60 Years of Survival Outcomes at the University of Texas, M.D. Anderson Cancer Center is the only book to concurrently present longitudinal data on survival outcomes across the spectrum of rare and common cancers. Each chapter deals with a specific disease site, discussing current management approaches and presenting key data replete with illustrative charts, graphs, and tables. With the resources available only to the practitioners at this inimitable institution, this book

heralds a cornerstone moment in the study of survival outcomes and the depth of our knowledge of cancer care.

Cancer Pain

Assessment and Management

Cambridge University Press This is the second edition of the widely praised book by Drs Eduardo D. Bruera and Russell K. Portenoy on all aspects of cancer pain.

Colon Polyps and Colorectal Cancer

Springer Nature This thoroughly revised and extended second edition of the book clearly explains the nature of colon polyps and their relationship to colorectal cancer in light of new developments. It discusses in detail new topics, including polyp development, risk factors and prevention measures, and also describes surgical, medical oncology and radiotherapy treatments of colon cancer. In cases of advanced colon cancer, it clearly demonstrates how to perform surgical interventions in the presence of urinary tract metastases and gynecologic organ metastases. The book also includes chapters on medical treatment and radiotherapy in distant metastases of colorectal cancer. Further, it presents resection of liver metastases and transplantation options. Carefully examining the risk factors, and the treatment of colon cancer from the early to the advanced stages, the book is invaluable not only for medical specialists and students, but also for general readers and patients.

Unconventional Cancer Treatments

The Office of Technology Assessment reviewed the issues surrounding unconventional cancer treatments. The results of that study are contained in this report. Topics covered include the types of unconventional cancer treatment most available to American citizens and how people access them; costs and means of payment; profiles of typical users of unconventional treatments; legal issues; and the potential for enhancing our knowledge about the efficacy and safety of these cancer treatments. OTA also examined a particular unconventional treatment, Immuno-Augmentative Therapy, and designed a clinical trial protocol to permit valid evidence of efficacy and safety to be gathered.

Treatment of Bone and Soft Tissue Sarcomas

Springer Science & Business Media Bone and soft tissue sarcomas represent only about 2% of all malignancies; however, their treatment - with the goal of curing the patient while preserving the functionality of the affected body part - can, unlike other malignancies, only be successful with therapy concepts devised by interdisciplinary teams. This volume provides an extensive up-to-date overview of the specific diagnostics and current treatment standards of these rare entities, presenting the various limb-sparing modalities for patients with bone and soft tissue sarcomas with special regard to innovative reconstructive options. The evaluation of quality of life based on validated scores and the individual methods of coping with the illness through creative artistic projects are also acknowledged and integrated in the whole concept.

Prostate Cancer: A Comprehensive Perspective is a comprehensive and definitive source which neatly resolves this problem. It covers relevant literature by leading experts in basic science, molecular

biology, epidemiology, cancer prevention, cellular imaging, staging, treatment, targeted therapeutics and innovative technologies. Prostate Cancer: A Comprehensive Perspective, is a valuable and timely resource for urologists and oncologists.

The Hahnemannian Monthly

Late Effects of Childhood Cancer

CRC Press The treatment of childhood cancer has become increasingly successful over the last forty years, and during the last two decades in particular, and the overall cure rate is now 60-70%. This, in turn, has introduced new issues for the clinician as the number of long-term survivors has increased. Some of the therapies that have contributed most to the improvement in survival are now known to have serious consequences for the patient in later life, and many survivors will be affected by physical, educational and psychological disability to a lesser or greater degree. This definitive reference brings together all aspects of long-term effects of treatment for cancer during childhood in a single comprehensive volume. International in perspective, the book is structured according to complication rather than original site of malignancy for ease of reference. Topics covered include problems in the neurological system and special senses of sight and sound, cardiovascular, respiratory, gastrointestinal, urological and musculoskeletal complications, effects on the endocrine system and, in particular, future fertility, and secondary cancers. The book also reviews in detail the important issues of quality of life, prevention initiatives and strategies for long-term follow up. Key point summaries are included throughout, and the references are annotated to guide the reader quickly to seminal primary papers and key review articles. With an accessible and consistent approach throughout, Late Effects of Childhood Cancer is an invaluable source of information and guidance for pediatric oncologists, who need to keep fully informed in order to advise patients and their parents appropriately, and also for pediatric and adult endocrinologists, adult oncologists and other physicians to whom the patient with late effects may initially present.

Principles of Cancer Biotherapy

Springer Science & Business Media At the time of the first edition of Principles of Cancer Biotherapy in 1987, this book represented the first comprehensive textbook on biological therapy. In 1991, when the second edition was published, there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches. By 2003 and the fourth edition,

it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies. Cancer biotherapy has now truly matured into the fourth modality of cancer treatment. This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment. This book summarizes an evolving science and a rapidly changing medical practice in biotherapy. In this new millennium, it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient's personalized cancer treatment. This was first envisioned in the 1987 initial edition of this textbook and is now a "new" and popular approach to cancer treatment. Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy, akin to the use of insulin in the treatment of diabetes. This textbook illustrates new methods of thinking and new strategies for control of cancer. It is always difficult to move from past dogma to future opportunity, but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy.

Progress against cancer

The Boston Medical and Surgical Journal

Cancer, Radiation Therapy, and the Market

Routledge Appraising cancer as a major medical market in the 2010s, Wall Street investors placed their bets on single-technology treatment facilities costing \$100-\$300 million each. Critics inside medicine called the widely-publicized proton-center boom "crazy medicine and unsustainable public policy." There was no valid evidence, they claimed, that proton beams were more effective than less costly alternatives. But developers expected insurance to cover their centers' staggeringly high costs and debts. Was speculation like this new to health care? Cancer, Radiation Therapy, and the Market shows how the radiation therapy specialty in the United States (later called radiation oncology) coevolved with its device industry throughout the twentieth-century. Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices, initiated companies to manufacture the devices competitively, and designed hospital and freestanding procedure units to utilize them. In the process, they incorporated market strategies into medical organization and practice. Although palliative benefits and striking tumor reductions fueled hopes of curing cancer, scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival. This thoroughly documented and provocative inquiry concludes that public health policy needs to re-evaluate market-driven high-tech medicine and build evidence-based health care systems.

Platinum and Other Metal Coordination Compounds in Cancer Chemotherapy 2

Springer Science & Business Media The 7th International Symposium on Platinum and other metal coordination compounds in Cancer Chemotherapy, ISPCC '95, organized by the European Cancer Centre, was held in Amsterdam, the Netherlands, March 1-4, 1995. As with previous ISPCC meetings, the goal of ISPCC '95 was to bring together clinicians, clinical investigators, scientists, and laboratory workers from many disciplines to promote further collaboration and cooperation in the development of new platinum and other metal coordination compounds as well as in new ways to use 'classical' drugs as cisplatin and carboplatin in the treatment of cancer. Important aspects addressed by experts in the field included the synthesis and activity of new platinum compounds, the biochemistry and molecular pharmacology as well as the clinical pharmacology of this class of antineoplastic agents, an overview of current clinical studies, one special minisymposium on the mechanisms of cell kill of platinum, and one on resistance against platinum compounds. Finally, the current status of development of nonplatinum metal complexes was discussed. This volume contains the contributions of the various speakers at ISPCC '95 and provides an up-to-date and comprehensive overview of this important class of anticancer agents, ranging from synthesis and molecular pharmacology on one hand to clinical pharmacology and clinical investigations on the other hand. The Organizing Committee and Editors wish to express their gratitude to the contributors to this volume, to the various organizations and pharmaceutical companies for their generous sponsoring of ISPCC '95, and to the Plenum Publishing Company for their help in producing this volume.
