The Soils of the Philippines

[Springer Science & Business](#) **The first soil survey in the Philippines was done by Mr. Clarence Dorsey, an American soil scientist in the province of Batangas in 1903. The Soils of the Philippines, however, is the first comprehensive summary of more than a century of soil-survey work in this country. It integrates the soil concepts of the reconnaissance soil-survey results, which commenced as early as 1934 and continued until the mid 1960s, with the semi-detailed soil surveys that continue to this day. The result is the first-ever genetic key for classifying Philippine soils at soil series level; thus, making it possible for any newcomers to the soil survey field to confidently produce their own soil map, at a more detailed map scale, to suit the project requirements. This book brings together discussions on soils and soil mapping units and up-to-date international techniques and technologies. It makes soils relevant to current political realities and national issues. As soil survey moves from a reductionist agricultural-development planning tool to a more holistic and integrated approach, to enable us to understand our dynamic and complex environment, The Soils of the Philippines will be the only source of authoritative and updated data on soil resources for macro-level resource management planning for decades to come. With a vanishing breed of experienced soil surveyors, not only in the Philippines but also worldwide, it may remain the only book on Philippine soils for the next hundred years or more. Since soils follow a geological and not a human time frame, the contents of this volume will stay relevant for soil surveyors even in a fast changing world. As the country leaps from an agricultural economy towards modernization and a more diversified economic base, some of the soil series in the Philippines, for example the Guadalupe series underlying the skyscrapers of Makati City, are becoming extinct as a result of urban development. Therefore, this book serves as the repository for the soils that we possess, the soils that have been lost through decades of urbanization while, at the same time, it creates a soil classification system for the soils we are yet to discover.**

A Slow Death

83 Days of Radiation Sickness

Vertical Incorporated Japan's worst nuclear radiation accident took place at a uranium reprocessing facility in Tokaimura, northeast of Tokyo, on 30 September 1999. The direct cause of the accident was cited as the depositing of a uranyl nitrate solution--containing about 16.6 kg of uranium, which exceeded the critical mass--into a precipitation tank. Three workers were exposed to extreme doses of radiation. Hiroshi Ouchi, one of these workers, was transferred to the University of Tokyo Hospital Emergency Room, three days after the accident. Dr. Maekawa and his staff initially thought that Ouchi looked relatively well for a person exposed to such radiation levels. He could talk, and only his right hand was a little swollen with redness. However, his condition gradually weakened as the radioactivity broke down the chromosomes in his cells. The doctors were at a loss as to what to do. There were very few precedents and proven medical treatments for the victims of radiation poisoning. Less than 20 nuclear accidents had occurred in the world to that point, and most of those happened 30 years ago. This book documents the following 83 days of treatment until his passing, with detailed descriptions and explanations of the radiation poisoning.

Learning with Information Systems

Learning Cycles in Information Systems Development

Routledge In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

Violence and Mental Health

Its Manifold Faces

Springer *Violence* is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

Operator Theory, Systems Theory and Scattering Theory: Multidimensional Generalizations

Springer Science & Business Media This volume contains a selection of papers, from experts in the area, on multidimensional operator theory. Topics considered include the non-commutative case, function theory in the polydisk, hyponormal operators, hyperanalytic functions, and holomorphic deformations of linear differential equations. Operator Theory, Systems Theory and Scattering Theory will be of interest to a wide audience of pure and applied mathematicians, electrical engineers and theoretical physicists.

Cat I Prep I Part 1

ISO 18436-2 Certified Vibration Analyst Category I: Principles of Vibration

This book is Part 1 of Cat I Prep I Package (8 parts) which is designed to help you prepare and pass Vibration Analyst Category I certification exam. Each part covers certain topics of the Body of Knowledge according to ISO 18436-2 standard. The questions are arranged in the Package to provide the best learning experience. Part 1 contains 111 questions on 'Principles of Vibration'. Cat I Prep I is the first package of its kind as it addresses all topics in the ISO standard for Category I in a form of question banks. All exam candidates can rely on the question banks, as the package is not biased towards a specific certifying body. The package offers more than 777 questions that are 12 times the questions in a real exam. Cat I Prep I meets and exceeds the standard requirements. The overall difficulty of Cat I Prep I is a bit higher than Cat I real exams in order to strengthen your readiness before taking the real exam.

Cold War Ecology

Forests, Farms, and People in the East German Landscape, 1945-1989

Yale University Press East Germany, its economy, and its society were in decline long before the country's political collapse in the late 1980s. The clues were there in the natural landscape, Arvid Nelson argues in this groundbreaking book, but policy analysts were blind to them. Had they noted the record of the leadership's values and goals manifest in the landscape, they wouldn't have hailed East Germany as a Marxist-Leninist success story. Nelson sets East German history within the context of the landscape history of two centuries to underscore how forest and ecosystem change offered a reliable barometer to the health and stability of the political system that governed them. Cold War Ecology records how East German leaders' indifference to human rights and their disregard for the landscape affected the rural economy, forests, and population. This lesson from history suggests new ways of thinking about the health of ecosystems and landscapes, Nelson shows, and he proposes assessing the stability of modern political systems based on the environment's system qualities rather than on political leaders' goals and beliefs.

Praying the Scriptures for Your Children

Discover How to Pray God's Purpose for Their Lives

You'll discover how to pray specifically and expectantly for their faith, character, safety, relationships, and future. You'll gain new, biblical perspectives on God's purposes for your children. And through the encouragement of the Scriptures and true-life stories, you'll find out what a huge difference your prayers really make in the lives of those you love most. Discover How to Pray God's Will for Your Children's Lives There's no place like God's Word to turn to when you want to pray confidently and effectively for your kids. "Prayers permeated with the Word of God bring about changes in our children and keep us in touch with God's priorities. This is a wonderful resource that you will want to refer to over and over." Fern Nichols, founder and president of Moms in Touch International "If I could choose only one book to help me pray for my children, this is it! Not only has Jodie given us a rich treasure of true stories, practical prayers, and relevant Scriptures for our children, but a surprise awaits! In reading this I found my own confidence in God growing. RUN and get this book for moms and grandmoms." Susan Alexander Yates, author of How to Like the Ones You Love "I know of no one who can speak more authoritatively than Jodie Berndt on praying for your children. Every parent who wants their children to grow into godly men and women should read this book.

The World Encompassed

Fairies Afield

Book Excerpt: ... But she said nothing of the sort of mystery connected with the powder; some instinct prevented her doing so. Nor did she tell that but a little of it remained, or that their stock of rose-leaves would soon be exhausted. "Who knows what may happen before that?" she reflected, and the words of Linde's dream-visitor recurred to her, "Three times, and then ask the robin." Dame Barbara was quite satisfied and greatly delighted. "Here," she said, fumbling for her substantial purse, "a groat for two ounces of it, did you say? No, a half-groat only? My dear, you'll have to raise your prices if the perfume is so excellent! Well to begin with, give me the four ounces straight away, and here's a half-groat over and above what it all comes to--dried leaves and fresh ones and flowers, all together--just the tiny silver piece for luck, you know."...

Hydraulics and Pneumatics

A technician's and engineer's guide

Elsevier *Hydraulics and Pneumatics: A Technician's and Engineer's Guide* provides an introduction to the components and operation of a hydraulic or pneumatic system. This book discusses the main advantages and disadvantages of pneumatic or hydraulic systems. Organized into eight chapters, this book begins with an overview of industrial prime movers. This text then examines the three different types of positive displacement pump used in hydraulic systems, namely, gear pumps, vane pumps, and piston pumps. Other chapters consider the pressure in a hydraulic system, which can be quickly and easily controlled by devices such as unloading and pressure regulating valves. This book discusses as well the importance of control valves in pneumatic and hydraulic systems to regulate and direct the flow of fluid from compressor or pump to the various load devices. The final chapter deals with the safe-working practices of the systems. This book is a valuable resource for process control engineers.

Judgment & Justification in Early Judaism and the Apostle Paul

Hendrickson Pub Is salvation a gift of God's grace or something God's followers must earn by good works? How do we reconcile the two emphases that salvation is a bestowal of God's mercy and that the final judgment will involve an assessment of the way people have lived during their time on earth? In *Paul and Palestinian Judaism* (1977), E.P. Sanders defined the terms and laid the groundwork for this crucial debate. Sanders's "New Perspective" sought to resolve the tension between grace and good deeds by arguing that for the Jews of Paul's day as well as for Paul himself, entrance into God's saving covenant was a gift of God's grace, while remaining in the covenant required good works done in obedience to God. Sanders's most vigorous opponents have disputed the works side of his formulation, taking issue with his contention that obedience is required to retain right standing in God's covenant. In *Judgment and Justification*, Chris VanLandingham challenges the grace side of the Sanders thesis, arguing that Paul's teaching on salvation, following the prevailing Jewish thinking of his time, establishes good works as the criterion for salvation at the final judgment. In making his case, VanLandingham does a text-by-text survey of early Jewish literature, interacting with a wide range of biblical scholars who deal with the themes of salvation and literature and judgment found in these texts and in the Pauline writings. VanLandingham wraps up this survey with a challenging reassessment of Paul's teaching in the light of the Jewish thinking of his time.

A Shift in the International Security Environment

Potential Implications for Defense-Issues for Congress

[Createspace Independent Publishing Platform](#) World events in recent years have led observers, particularly since late 2013, to conclude that the international security environment in recent years has undergone a shift from the post-Cold War era that began in the late 1980s and early 1990s, also sometimes known as the unipolar moment (with the United States as the unipolar power), to a new and different situation that features, among other things, renewed great power competition with China and Russia and challenges by these two countries and others to elements of the U.S.-led international order that has operated since World War II. The shift in the international security environment has become a major factor in the debate over future U.S. defense spending levels, and has led to new or renewed emphasis on the following in discussions of U.S. defense strategy, plans, and programs: grand strategy and geopolitics as part of the context for discussing U.S. defense budgets, plans, and programs; U.S. and NATO military capabilities in Europe; capabilities for countering so-called hybrid warfare and gray-zone tactics employed by countries such as Russia and China; capabilities for conducting so-called high-end warfare (i.e., large-scale, high-intensity, technologically sophisticated warfare) against countries such as China and Russia; maintaining U.S. technological superiority in conventional weapons; nuclear weapons and nuclear deterrence; speed of weapon system development and deployment as a measure of merit in defense acquisition policy; and minimizing reliance in U.S. military systems on components and materials from Russia and China.
